

Experiment 10

Aim: Notepad Website

Theory: The "Notepad Website" is a robust web application developed using ReactJS, designed to provide users with a feature-rich note-taking and organization experience. This project is aimed at offering users a seamless and user-friendly platform for creating, managing, and organizing their notes efficiently.

Output:

Conclusion: The "Notepad Website" offers an easy-to-use, versatile, and efficient platform for taking digital notes and staying organized. It's a practical tool for various tasks, from jotting down ideas to creating to-do lists. The use of React props and useState ensures smooth interactions and real-time updates, enhancing the user experience. Whether you need a personal digital notepad or want to learn ReactJS, this project is a valuable choice.
